🐙 github.com/RahilMulla12

Profile

Backend-focused Python Developer with hands-on experience building scalable web applications using Django, REST APIs, PostgreSQL, and real-time WebSocket systems. Experienced in designing modular backend architectures, authentication workflows, and database-driven applications. Strong understanding of backend development principles including API design, asynchronous communication, and database optimization. Seeking a Backend / Python Developer Internship to contribute to production-grade systems while expanding expertise in scalable backend engineering.

Education

Bachelor of Computer Applications (BCA), Shivaji University, Kolhapur 2026

- Relevant Coursework
- Data Structures
- Database Management Systems
- Web Development
- Software Engineering

TECHNICAL SKILLS

Programming Languages

- Python
- JavaScript
- Java

Frontend Technologies

- HTML5
- CSS3
- Bootstrap

Tools & Platforms

- Git
- GitHub
- VS Code
- Linux
- Redis
- Postman / API Testing
- JWT / OAuth2
- Basic Linux/Shell scripting

Core Concepts

- REST API Development
- Authentication & Authorization
- WebSockets & Real-time Communication
- Database Design & Django ORM
- MVT Architecture

Backend Frameworks

- Django
- Django REST Framework
- Flask (Basic)

Databases

- PostgreSQL
- MySQL
- SQLite

Deployment & Cloud

- Vercel
- Supabase

Projects

E-Commerce Web Application, *Tech Stack: Django, PostgreSQL, HTML, CSS, Bootstrap*

- Developed a full-stack e-commerce platform using Django with modular app architecture (Products, Accounts, Inquiries).
- Implemented secure authentication and session management using Django's built-in authentication system.
- Designed and integrated PostgreSQL database schema using Django ORM to manage products, users, and inquiries.
- Built custom inquiry and quotation request workflows enabling user interaction with product listings.
- Implemented CRUD operations and form validation for dynamic product management.
- Deployed the application using Vercel with Supabase PostgreSQL database.
- Live Application: <https://django-postgresql-git-main-rahilmulla12s-projects.vercel.app>

Real-Time Chat Application, *Tech Stack: Django Channels, WebSockets, JavaScript, Bootstrap*

- Built a real-time messaging application inspired by WhatsApp using Django Channels and WebSockets.
- Implemented asynchronous consumers to enable instant message delivery without page refresh.
- Designed secure authentication and session handling using Django authentication framework.
- Enabled real-time bidirectional communication between users through WebSocket connections.
- Developed responsive UI components using HTML, CSS, JavaScript, and Bootstrap.
- GitHub Repository: https://github.com/RahilMulla12/Whatsapp_clone

ADDITIONAL INFORMATION

Backend Development Focus

- API-first backend development using Django REST Framework
- Real-time systems with WebSockets and asynchronous consumers
- Database-driven applications with PostgreSQL

Strengths

- Strong debugging and problem-solving ability
- Quick learner with ability to adapt to new technologies
- Experience deploying live web applications
